CFS RealityCheck

The Perfect Cyber Storm

In 2020 the world was hit by a pandemic, causing companies to radically adapt to a remote and hybrid working environment.

Cyber Security struggled to apply adequate controls to secure data, migration to cloud was expedited, and equipment was quickly redistributed to uncontrolled and insecure home environments.

Organised Cyber Crime adapted to exploit this change. 350,000 new malware programs are discovered daily, Ransomware is the weapon of choice and data exfiltration provides significant monetisation options.

The cost to business is huge with the average cost of data breach reaching £3.12 million and average cost of remediating a ransomware attack being £1.36 million.

Cyber Security Audit

- Data Security and Risk Assurance audit
- Hybrid working Risk discovery
- Supply Chain Security
- Business Change baseline audit
- Annual compliance audit
- Discovery of diversity adjustment needs
- UK GDPR compliant remedial action post data breach
- Workforce optimisation

CFS RealityCheck - Baseline and Enhanced

Providing authentic insight into the security behaviours of hybrid employees.

CFS RealityCheck provides information security managers and compliance / assurance leads an audited understanding of the real world cyber security risk posed by employees working away from the office environment. CFS RealityCheck is built to gain authentic insight of employee behaviours which may circumnavigate technical controls or written company policies.

CFS RealityCheck - Baseline gains information from employees through interactive, intrusive and bespoke questioning. This allows staff to be honest about their cyber security behaviours which generates a comprehensive audit report.

CFS RealityCheck - Enhanced combines baseline audit with employee interviews, conducted by skilled and trained CFS staff, drawing out further insight where necessary while providing bespoke and relevant training and awareness to employees, specific to their needs.

Digital Transformation Consulting

CFS provides a consultancy service to help your business understand how to benefit from a digitally capable workforce and develop a recruitment pipeline for new young talent.

Community Engagement

CFS consultants can support your community with digital workshops, CPD events, or lectures enabling your community to grow digitally yet remain cyber secure.

Partnerships

CFS actively seeks new partnerships, aimed at community and environmental enrichment.

CFS is proud to be carbon neutral

Digital Transformation Consulting

CFS has significant experience in managing and developing a digitally capable but cyber secure workforce in modern times. Their consultants can support your business in development of new recruitment strategies based around a diverse workforce, providing innovation and flexibility and raising the Cyber security awareness baseline.

Community Engagement

CFS believe that the best way to achieve business success is through sharing of cyber security knowledge and information. The team of consultants are able to provide informative and relevant workshops, CPD events, lectures or visits to help assist your community or professional body achieve an acceptable minimum standard of cyber awareness and data security.

Working with academia has allowed CFS to enrich the knowledge of communities while providing valuable experience to digitally capable young people.

CFS is partnered with:

- NCSC - Cyber First scheme for student intern development.
- Cyjax Ltd - Threat Intelligence.
- Academia throughout UK
- The Woodland Trust - Revenue based contributions to achieve carbon neutral or negative business practices.

Cyber Force Services Ltd

Support in a new age

Cyber Force Services understands that this is a fast moving digital environment with new challenges and opportunities at every turn. They believe that the secret to success is through development of young minds alongside experience. This means thinking differently about our communities and the hidden talent within.

They are positioned with experience and knowledge to ensure that you continue to be ahead of the game with cyber security in mind, enabling you to innovate successfully and safely.

The team are ready for your call, no matter how big or small the ask.
